

# LHCb Computing Operations

Monday, March 05, 2007

**Present** : Philippe Charpentier, Joel Closier, Davide Perego, Nick Brook, Stuart Paterson, Andrew Smith, Roberto Santinelli, Marco Adinolfi, Marcos Seco Miguelez

## **Simulation**

Production running smoothly. LCG-UCL has been banned because lot of jobs were STALLED.

On Friday the JobReceiver was stuck again. There is a constant increase of STALLED jobs since one week from 3000 to 10000. Is it related to the pilot submitted by the gLite RB ? Which is running jobs under the HOME directory instead of the BATCH working directory.

The version which is running of the DirectorAgent for glite is not committed into CVS

Jobs from Marcos are failing to save OUTPUT. Is it due to the new DN of Marcos ?

## **Reconstruction**

15% of the reconstruction jobs finished successfully.

CERN and PIC all jobs are OK.

NIKHEF and GRIDKA are running OK

IN2P3 and RAL problem with the way how dcache is treating some files which are not staged.

CNAF seems to have difficulty to run fine since the 1st of March

Lot of jobs rescheduled this morning.

To try to bypass this problem, we will introduce in DIRAC a call to "dccp" if the flag isDcache is set to false. To force the stagein.
