

LHCb Computing Operations - minutes of the meeting 8th february 2007

Present : Joel Closier, Angelo Carbone, Andrei Tsaregorotsev, Philippe Charpentier, Davide Perego

Excused : Nick Brook, Raja Nakadumar

Action list:

- 1 - joel : Clean the VO_LHCB_SW_DIR
- 2 - andrei : Move jobDB from lxgate to volhcb02
- 3 - raja : stop all transfer agent on the VOBOX
- 4 - joel : change the alias for lhcb-dirac-production

Simulation

Everything has been stopped. The system is draining the last jobs. This afternoon we will stop all services for the production systems and all the transfer agent on the VOBOX and Andrei will move the jobDB from lxgate to volhcb02. This will allow us to have a consistent database after the migration. Andrei will take this opportunity to write down all the actions which needs to be done to move such a database to speed up the process next time.. When the transfer will be done, Joel will ask to change the alias lhcb-dirac-production.cern.ch to point to volhcb02.

We take this opportunity to clean all the VO_LHCB_SW_DIR directory to make sure that the problem of recursive link is well solved.

We can not continue to test the latest release of DIRAC because there is a problem with the TEST system. The default timeout to close a connection of MYSQL was too short after the migration of the test system to lxgate03. problem solved now.

On lxb2008 it has been difficult to kill the process which was sending pilot job because the crontab was owned by Ricardo.

Plan:

After the migration of the production system and after the test of dirac release v2r12p10 on the test system, we plan to restart on Monday with the latest version of Gauss and v2r12p10 will become v2r13 if it is OK.
