

# LHCb Computing Operations

Thursday, March 08, 2007

**Present** : Joel Closier, Davide Perego, Nick Brook, Stuart Paterson, Andrew Smith, Roberto Santinelli, Marcos Seco Miguelez, Angelo Carbone, Raja Nandakumar, Andrei Tsaregorotsev

## **Simulation**

Nothing special. All pending requests have been prepared.

## **Reconstruction**

No job rescheduled at RAL and IN2P3. All the other sites are running.

Stagein service is tested to solve the problem of lcg-gt problem. The job with INPUTDATA is submitted to the DATA optimiser the status is set to waiting for stagein. A stagein request is sent to the site and as soon as all the files are staged, the status of the job is changed to Waiting. 1 Thread by Tier1 site is set.

We roll back the lcg-getturls to lcg-gt and a v2r13p7 version of DIRAC is in preparation.

After the network intervention at CERN this morning, all services have been restarted to be sure that they are running smoothly.

## **VOBox transfer**

V2r13p6 is installed. Lot of queries to the top-bdii. Raja will check that on each VOBox we will use the local bdii and not the top one.

## **AOB**

Nick asks to restart the reconstruction for b-incl on site which are running and to restart activity with stripping.

Angelo informs us that the srm-durable endpoint is set at CNAF and a news will be issued during the day.
