

LHCb Computing Operations

Monday, February 19, 2007

Present : Philippe Charpentier, Joel Closier, Davide Perego, Cedric Potterat, Raja Nandakumar, Nick Brook, Andrei Tsaregorotsev, Marco adinolfi, Stuart Paterson, Andrew Smith

Action list:

- Joel : change the alis for WMS test
- Andrew : populate the processing DB for Maxi Bias

Simulation

All jobs for new production and jobs for production correcting the BUG#1 have been submitted. No more WAITING jobs.

Manchester has lot of pilot agent aborted even if we are running more than 1000jobs. Waste of pilot. Problem of ranking.

Test of DIRAC release v2r13p1 not yet finished because the WMS system was stuck. The monitorAgent has been restarted to cure the problem.

The change of alias for the testWMS was not done.

Sara: pilots are run at SARA but the tag are not publish and jobs are rescheduled. Potential bug in the logic.

Reconstruction

Andrew and Joel made a list of Maxi Bias production and the DIGI files are spread over the Tier1s.

Andrew will populate the processingDB and we will start the reprocessing.

What is the status of the B-incl reprocessing ?

Vobox

The problem of LocalCache transfer is perhaps explain by some transfer of LOGSE or when jobs failed to register entries in the LFC.

Cleaning:

SIM could be deleted except the one from Matt's list
