LHCb Computing Operations

Monday, April 23, 2007

Present : Joel Closier, Andrew Smith, Marcos Seco Miguelez, Gianluca Castellani, Roberto Santinelli, Raja Nandakumar, Gennady Kuznetsov, Cedric Poterat, Ricardo Graciani-Diaz, Marianne Bargiotti, Stuart Paterson, Nick Brook, Andrei Tsaregorotsev, Roland Bernet

Simulation :
Nothing to report. No simulation running

Reconstruction:
PIC, IN2P3 : running OK
CNAF : ok but only 3 jobs
CERN: few failure but OK in general
GridKA : 1/4 OK, 1/4 running, 1/4 failed and 1/4 in staging
RAL: problem of mapping with Raja. He is mapped to lhcbsgm and the jobs are failing in the install_project
NIKHEF: some failure with lcg-gt and while saving the output to NIKHEF-tape.

The problem of install_project which occurred as well at NIKHEF is not yet understood because the log of the installation show that the install is OK but for some reason, the job exited with and error which is not seen and understood. One solution to be implemented by oel is to run the installation on the shared only if the job type is SGM and nothing else.

As soon as the file are available for the b-inclusive they will be enter in the processing DB and submitted.

Stripping:
Some standard job failled in the mode "STALLED". Some jobs with only 100 events succeeded but we noticed that at CNAF the time spent is more than 20 minutes than for NIKHEF it was 323 s. To be checked by Marco

AOB:
Marianne is starting th ecleaning of SIM and DIGI prior to Gauss v24r8
