

# LHCb Computing Operations

Monday, March 26, 2007

**Present** : Joel Closier, Davide Perego, Nick Brook, Andrew Smith, Marcos Seco Miguelez, Philippe Charpentier, Andrew Pickford, Marianne Bargiotti, Gianluca Castellani, Roberto Santinelli, Andrei Tsaregorotsev, Daniela Bortolotti, Angelo Carbone, Roland Bernet

## **Simulation**

Nothing special to report. All small production have been submitted and run. Potentiel problem with one and new requests submitted by Olivier to be handle. The dimuon production is still on hold.

## **Reconstruction**

Joel will check this afternoon with Stuart to put in production the stager. IN2P3 has open the port to use dcccc . So now we are able to run the reconstrcution everywhere except at PIC where the TURL is not correct. GGUS ticket opened.

Joel will modify the LHCbCheckLogFile to report as a job parameter the number of file which have been successfully processed.

The cleaning of RDST is not yet finished. No news from GridKa and IN2P3.

Marianne reported that lot of files with CERN\_Castor are registered in the LFC. First we have to clean the bad SIM and digi and then we have to check where they come from.

Marianne, Andrew S. and roberto will work togeteher to clean the DST to have a copy on 4 Tier1s. This is TOP priority as most of our T1 disk are full. In particular they should evaluate the time taken by lcg-clean

## **AOB:**

Job efficiency in UK will be look at by Joel.(QMUL, RAL-LCG2, UCL, Liverpool, IC, Cambridge)

Raja will stop the Transfer agent at In2P3 and SARA where andrew s. has no access. Then we will run the tool made by Andrew to clean all pending transfer that should not be proceed.
